REAL SEA MONSTERS: THE ANGLERFISH

The ocean holds amazing secrets that some scientists have not yet discovered. Some scientists have been brave enough to go deep into the darkest sea waters to find frightening species.

For example, the famous anglerfish, famous in 'Finding Nemo', was caught on film in the depths of the ocean for the first time. Scientists believe global warming is affecting its environment, bringing the rare anglerfish species to unknown waters.

In the darkness of deep water, they flash their light to attract prey to their mouth. When a fish or a squid swims up, it is quickly entrapped by the anglerfish's huge mouth and trapped by its long, sharp teeth.

11 Ask a classmate.

a. How can the anglerfish survive?
b. How can scientists discover new species?
